

We want you to choose your energy future

energised
2021-2025

The energy market is changing

Electric vehicle, solar and battery use is increasing, and there is unprecedented demand from you to choose and manage how you use electricity.

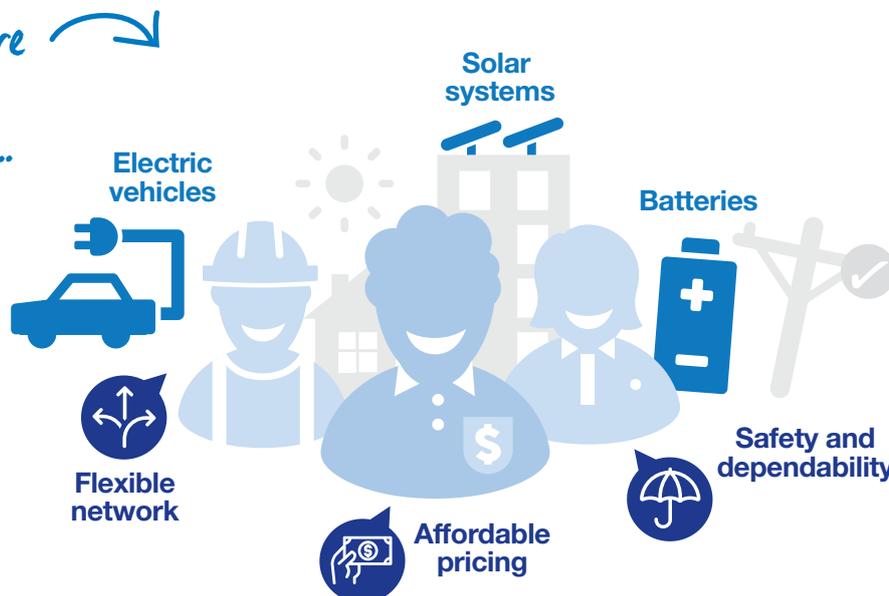

Since early 2017 we've engaged with over 5,000 customers across our networks about our future plans. You've told us you want a dependable and safe network, with the flexibility to choose how you use electricity at an affordable price.

We're supporting your energy choices through fair and simple charges

We want you to be able to make savings by changing when you use electricity, so we can build in less capacity and lower everyone's charges.

Our aim is to set simple and fair price structures across our network without compromising safety and reliability.

We'll see more of these in the future...

We'll continue to deliver on these...

Every day we supply your household or business with electricity to power your activities. We aim to deliver a safe, dependable and flexible supply of electricity, while keeping our prices among the lowest in the country.

Safe and dependable

We're using cutting-edge technology and research partnerships with Universities and Government to deliver innovative, world-class safety initiatives.

We've achieved a 19% reduction in public safety incidents since 2013. Safety continues to be our number one priority, always.

We've invested over \$99m to ensure the electricity supply to Melbourne is secure. Our job is to provide you a dependable supply of electricity now and into the future.

We continue to be Australia's most reliable network – available for over 99.99% of the year, or just 20 minutes off supply per annum for average customers.

Flexible

We're investing over \$44m to modernise our network in the Brunswick and Port Melbourne areas. You've told us you're changing the way you use, store and sell electricity.

We're supporting major infrastructure projects that will help grow the Victorian economy, including Metro Rail, the West Gate tunnel, and the redevelopment of Victoria Market.

We'll continue to use 'smart' meters to identify and respond to safety risks before they occur. We're making the most of your investment.

Affordable

We already deliver some of the lowest distribution network charges in Australia, but we know energy affordability remains a major concern for you.

We're reducing our charges by \$25 for residential customers and \$94 for business customers in 2021.

We'll continue to be one of the most cost-efficient distributors in Australia based on independent benchmarking – providing you value for money.

We want to hear your feedback!

Get involved

You can submit feedback on our draft proposal and connections policy through the contact form provided on our Talking Electricity website.

We welcome all feedback or questions, no matter how long or short.
